

The project started when the user chose the CSV to be incorporated into the project, later when he selected the button in the decision tree, the Test method was started.

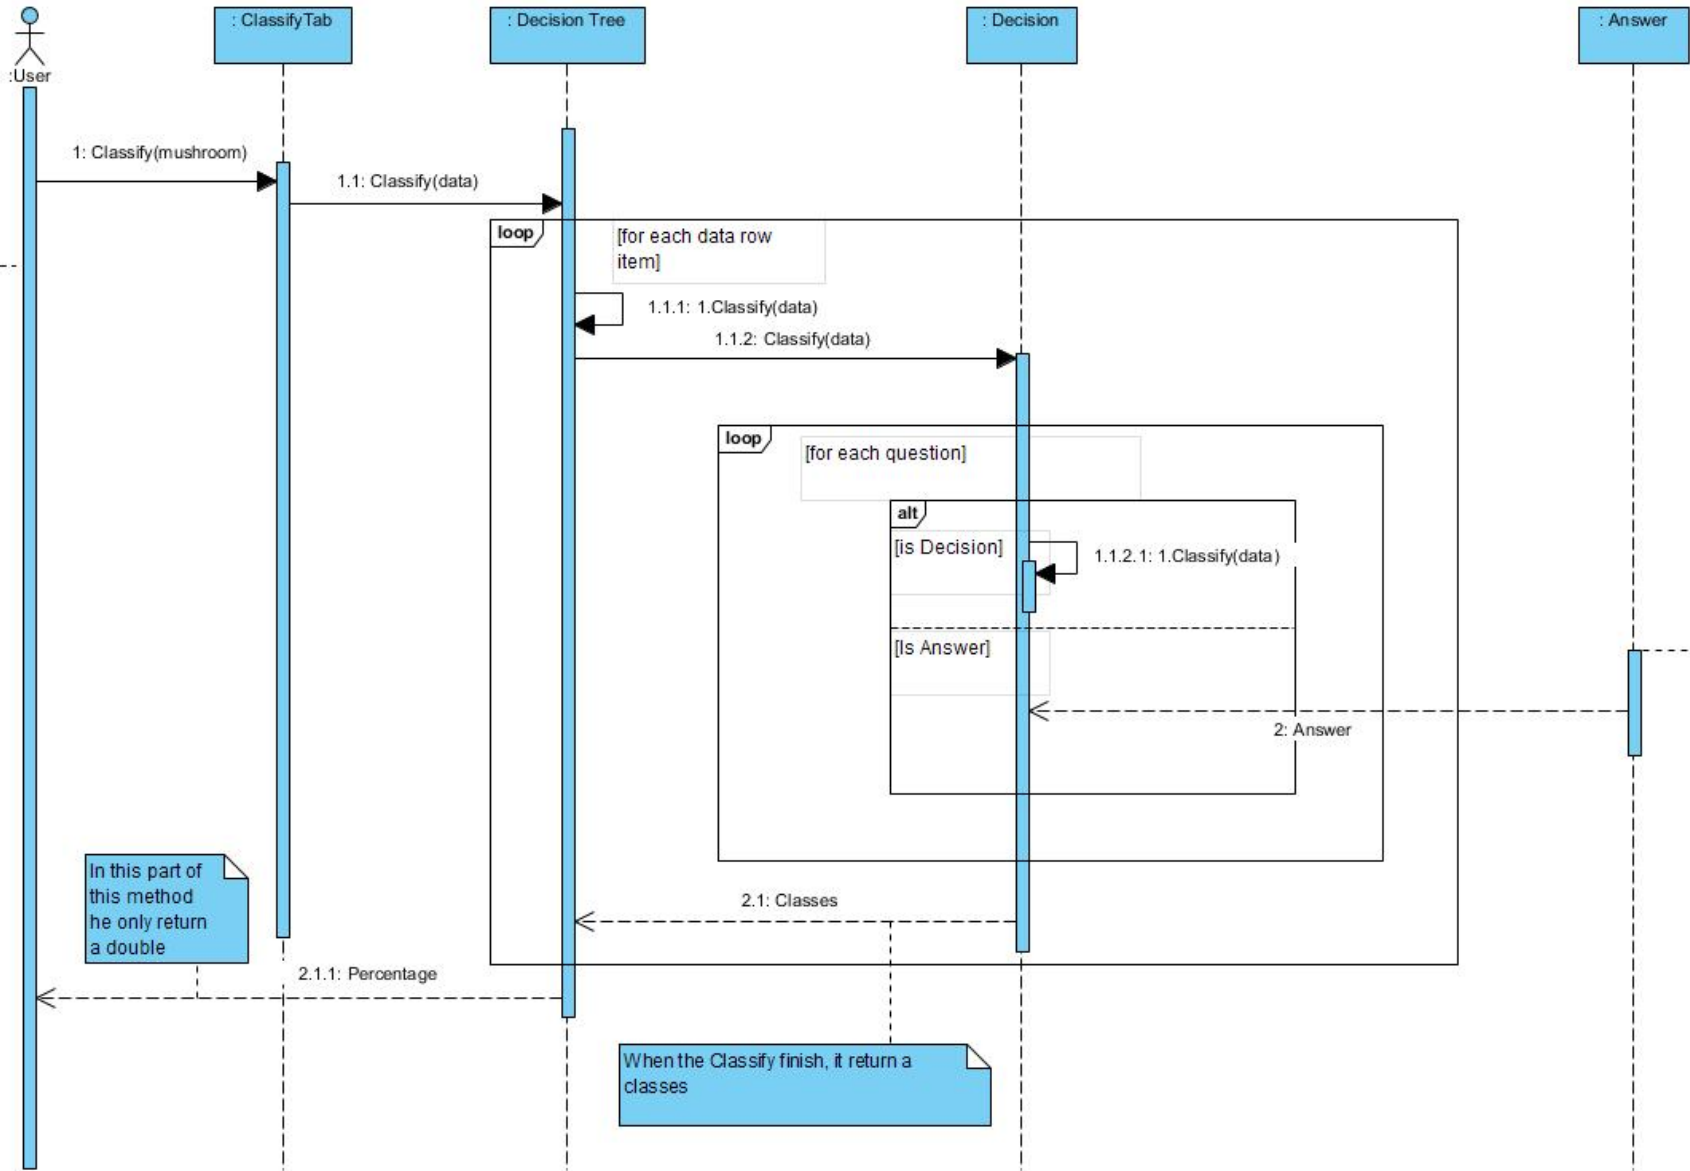

In this process when we create these objects, they repeat the method Grow for expand the decision tree. For this reason why only create the objects.

The project started when the user choose the CSV that be incorporated into the project, later when he selected the button in the decision tree the method Test was started.

The project started when the user choose the CSV that be incorporated into the project, later when he selected the button in the decision tree the method Test was started.

In this part of this method he only return a double

When the Classify finish, it return a classes

In this process we only create a object that type is answer we call the properties
